

REOX series

Environmental Pollution

GLOBAL ISSUES

There are five areas that are free of pollution, with locals generally healthy and living a long life. These areas came to be known as

5 Areas

1) Hotan Xin Jiang, China

3) Vilcabamba, Ecuador

Longevity Regions

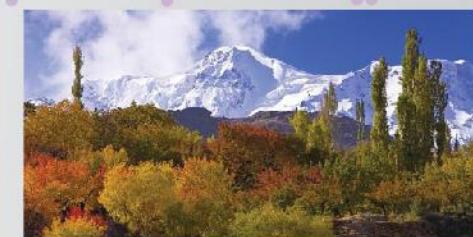

Zero Pollution

2) Bama GuanXi, China

4) Caucasus Region

5) Hunza Pakistan

One of the discoveries in this region is the **water source** that is very rich with **negative hydrogen ions**. This is the primary reason the locals are very healthy and have a long life expectancy.

Water Source

Negative Hydrogen Ions

In 1994, an American scientist by the name of Dr. Patrick Flanagan took water samples from the longevity regions. He then developed the negative hydrogen ion technology with the intention of providing it to every American household.

Three great inventions

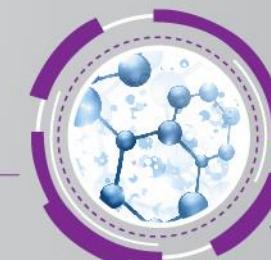

Missile detector

Succeeded in creating and launching a test missile at age 11 and conferred it to the US military.

Neurophone

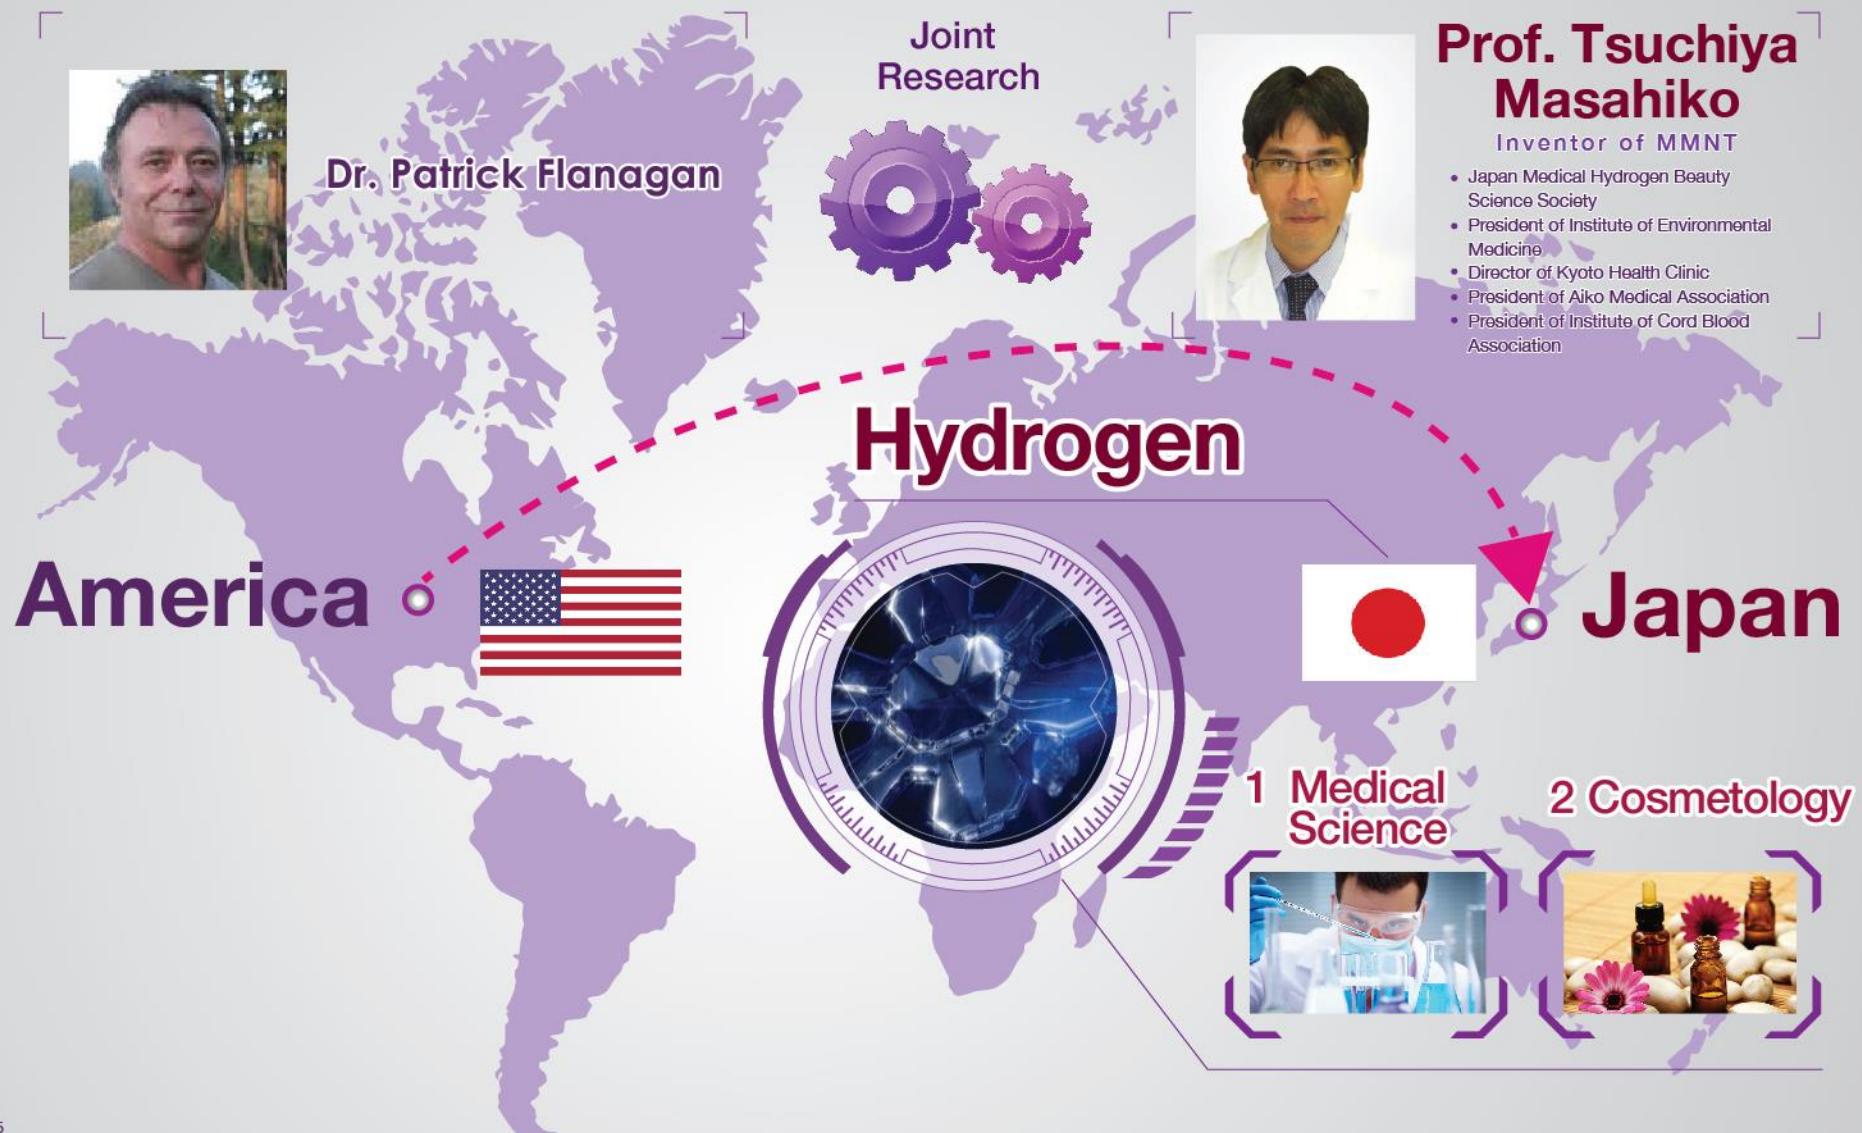

Sound is transmitted to the brain via the nervous system, facilitating the transmission of sound waves. It was patented in the US in 1968.

Micro atomic negative hydrogen ions

A groundbreaking research was conducted on the structures of water and mineral. A few scientists at Oxford University and Stanford University carried out a research on micro atoms that can reduce the surface tension of water.

The technology was later brought to Japan. Dr. Tsuchiya Masahiko and Dr. Patrick Flanagan conducted research to establish this technology in different areas of study. In Japan, it is known as "the water element" and has been widely used in the medical and cosmetic fields.

Subsequently, **Return Legacy** collaborated with Dr. Tsuchiya Masahiko to bring this technology to **South East Asia**, starting with **Malaysia**, and named it **MMNT**.

MMNT

Micro-Mineralized Nutrient Technology
**Micro Mineral Nutrient Technology
(MMNT)**

1

Refining molecular clusters

2

Neutralizing chemical substances

3

Reversing Oxidation

The main function of MMNT is to refine molecules , as they are easily absorbed by the body; neutralize chemical substances ; and reverse oxidation . Aside from bypassing oxidation, MMNT is also capable of reversing oxidation.

MNNT is the main H⁺ technology. It increases and stabilizes negative hydrogen ions in water. H⁺ functions as an anti-inflammatory, repair agent and moisturizer. Using the longevity village's magical water source as a reference, we would like to bring the miraculous powers of negative hydrogen ions to every family.

A Miraculous Water Source

How to use

1 The features of the H+ spray:

Eliminates excess dirt and oil on hair and scalp while maintaining healthy hair.

2 The features of the H+ spray:

Gets rid of conditions associated with sensitive eyes so that the eyes are more comfortable and able to see clearer.

3 The features of the H+ spray:

Combats halitosis and helps to freshen breath.

4 The features of the H+ spray:

Gets rid of underarm odor.

5 The features of the H+ spray:
Accelerates wound healing.

6 The features of the H+ spray:
Removes lower body odor.

7 The features of the H+ spray:
Events out the skin tone of thighs.

8 The features of the H+ spray:
Eliminates foot odor.

2 Replaces toner as a moisturizer

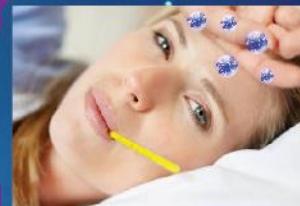

3 Used in combination with facial cleanser to improve the cleaning effect

4 Used in combination with toothpaste to improve the cleaning effect

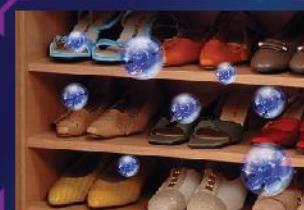

1 Regulates body temperature

H+

5 Eliminates nasty odors from shoe cabinets

7 Eliminates bad odors from cars

6 Eliminates unpleasant odors from refrigerators
